

quantum visibility

glass windshield protection

Designed especially for automotive windshields

- ◆ Enhances clarity in wet conditions
- ◆ Reduces night glare
- ◆ Makes glass more resistant to small road debris - preventing chips and cracks

How quantum visibility works

Nano-technology and unique bonding agents are utilized to adhere this unique material to glass surfaces.

It creates a hydrophobic and protective coating by chemically capping the glass pores and its surface ridges. This strengthens and improves the qualities of your windshield.

With the application of quantum visibility, we include a limited warranty benefit for up to 3 years for the repair of minor chips and cracks occurring to your glass windshield.
